ABSTRACT OF THE DISCLOSURE

A buckling device for disposable articles including a disposable article made up of a front piece with a fleece sticker, and a rear piece having adjusting buckle belts attached at both opposing lateral edges to be mutually fastened to the fleece sticker. The adjusting buckle belt has a buckling section made up of a plurality of jump-type fastening facets and flexible soft facets alternatively arranged at the inner lateral side to keep the proper softness of the buckling section. Thus, in buckling engagement, the fastening facets of the buckling sections will be firmly attached to the fleece sticker respectively in a jump-type manner with the flexible soft facets alternatively dividing the fastening facets so that both the front and rear parts of the buckling sections can be precisely buckled up with the fleece sticker preventing the buckling sections from being twisted or torn apart easily.
